

TETRIS

GAME DESIGN DOCUMENT

CONFIDENTIAL • 1984-1985 • ALEXEY PAJITNOV

2. COLOR PALETTE

Category	Colors
Primary Colors	Neon Cyan (#00F0FF) Electric Magenta (#FF00FF) Arcade Yellow (#FFD700)
Secondary Colors	Deep Purple (#6B2D9E) Matrix Green (#00FF41) Warning Red (#FF1744)
Background	Dark Navy (#0A0E27) Panel Gray (#1A1F3A)
Accent	Bright White (#FFFFFF) Glow Orange (#FF6B35)

3. TETROMINO PIECE COLORS

Piece Name	Letter	Color Name	Hex Code
I-Piece	I	Cyan	#00F0FF
O-Piece	O	Yellow	#FFD700
T-Piece	T	Purple	#A020F0
J-Piece	J	Blue	#0000FF
L-Piece	L	Orange	#FF8C00
S-Piece	S	Green	#00FF00
Z-Piece	Z	Red	#FF0000

4. UI COMPONENT SPECIFICATIONS

Screen Layout

Main play area: 10×20 grid (Matrix) centered on screen. Background is Dark Navy (#0A0E27) with thin Neon Cyan (#00F0FF) grid lines for cell readability. Side panels sit to the right (or split left/right for wider layouts) and include dedicated modules for **SCORE**, **LEVEL**, **LINES**, and **NEXT** piece preview (with optional HOLD below in modern mode).

Typography

All text uses the Pixelify Sans font family. Headings: bold (700) with Neon Cyan (#00F0FF). Body text: regular (400) with Bright White (FFFFFF). Score numbers and high-visibility counters: bold (700) with Electric Magenta (FF00FF).

Border & Frame Design

Use thick borders (8–10px) in Neon Cyan (#00F0FF) with corner-bracket framing inspired by “ ┌ ┐ ” terminal UI. Apply a subtle inner glow on all panels (cyan glow over Panel Gray #1A1F3A). Add a scanline overlay to the full screen for an authentic CRT feel.

Button Design

Buttons are rectangular with beveled edges. Default state: Electric Magenta (#FF00FF) fill with Bright White (#FFFFFF) label. Hover/active state: Arcade Yellow (#FFD700) label with intensified electric glow; keep edges crisp and pixel-aligned to preserve the arcade aesthetic.

5. GAME MECHANICS OVERVIEW

- **Core Loop:** Pieces fall → Player rotates/moves → Lines clear → Score increases → Speed accelerates
- **Controls:** Arrow keys for movement, Z/X for rotation, Space for hard drop, C for hold
- **Gravity System:** Starts at 48 frames/row (Level 0), accelerates to 1 frame/row (Level 29+)
- **Scoring:** Single (100pts) → Double (300pts) → Triple (500pts) → TETRIS (800pts), multiplied by (level+1)

6. VISUAL EFFECTS & POLISH

- **Line Clear Animation:** Horizontal flash in Bright White (#FFFFFF); particles burst outward tinted by the cleared line’s piece colors
- **Piece Lock:** Brief white flash on lock; subtle screen shake on Tetris (4-line) clears
- **Level Up:** Full-screen neon pulse; “LEVEL UP” text zooms in with Electric Magenta (#FF00FF) glow
- **Background:** Animated starfield or retro grid pattern with subtle parallax scrolling
- **CRT Effects:** Scanlines (2px horizontal lines at ~50% opacity), slight chromatic aberration, corner vignette

7. AUDIO DESIGN NOTES

- **Music:** Korobeiniki (Russian folk theme) arranged in chiptune 8-bit style

- **SFX:** Rotation (blip), lock (thud), line clear (ascending chime), Tetris clear (triumphant fanfare), level up (power-up sound)
 - **Processing:** All sounds should evoke authentic arcade hardware—slight distortion, limited bandwidth, and punchy transients
-
-

8. GAME MODES

- **A-TYPE (MARATHON):** Endless play with continuously increasing speed; play until top-out
 - **B-TYPE (FIXED GOAL):** Clear 25 lines with pre-filled garbage rows; rocket launch ending sequence on success
 - **SPRINT:** Clear 40 lines as fast as possible; time is the primary result metric
 - **ULTRA:** Maximize score within 2 minutes; encourages aggressive scoring and efficient stacking
-
-

9. TECHNICAL SPECIFICATIONS

- **Resolution:** 1920×1080 (16:9) or 1280×720 for authentic arcade feel
 - **Frame Rate:** 60 FPS locked
 - **Matrix Size:** 10 columns × 20 visible rows (+ 2 hidden spawn rows)
 - **Randomizer:** 7-bag system (modern) or pure random (classic mode)
 - **Rotation System:** SRS (Super Rotation System) with 5-point wall kick
-
-
